ASSESSMENT AND DIAGNOSIS
Signs and Symptoms of Visceral Pain
Signs and Symptoms of IBS

- Abdominal pain or cramping
- Bloated feeling
- Gas
- Diarrhea or constipation
  - Sometimes in alternating bouts of constipation and diarrhea
- Mucus in the stool
- Bowel movements improve the discomfort
- Feeling that a bowel movement is incomplete

Signs and Symptoms of Interstitial Cystitis

- Chronic pelvic pain
- Pain between vagina and anus (women) or scrotum and anus (men)
- Persistent, urgent need to urinate
- Frequent urination – often small amounts – throughout the day and night
  - Up to 60 times/day
- Pain/discomfort while bladder fills
- Relief after urination
- Painful sexual intercourse

Signs and Symptoms of Endometriosis

- Dysmenorrhea
- Pain with intercourse
- Pain with bowel movements or urination
- Excessive menstrual bleeding
- Infertility
- Fatigue
- Diarrhea or constipation
- Bloating
- Nausea

Especially during menstruation

Signs and Symptoms of Vulvodynia

- Pain in genital area:
  - Burning
  - Soreness
  - Stinging
  - Rawness
  - Painful intercourse
  - Throbbing
  - Itching

- Occasional or constant pain that can last for months or years

Vulvodynia Questionnaires
ISSVD Vulvodynia Pattern Questionnaire

**What are your symptoms? (circle all that apply)**
- burning
- stinging
- rawness
- irritation
- soreness
- itching
- stabbing
- knife-like
- paper-cuts
- aching
- other

**Which of the following problems do you have? (circle)**
- Fibromyalgia
- High blood pressure
- Frequent headaches
- Angina pectoris/heart attacks
- Frequent urinary tract infections
- Diabetes mellitus
- Chronic fatigue syndrome
- Genital herpes
- Low energy levels
- Thyroid disease
- Depression
- Sinus problems/hay fever
- Difficulty sleeping
- Allergies to medications
- Weight gain or loss of more than ten pounds unintentionally in the past six months
- TMJ syndrome (temporomandibular joint)
- Back pain
- Pelvic pain

**Which of the following produces pain?**
- Sexual intercourse
  - If yes,
  - With penetration
  - During intercourse
  - After intercourse
  - With all partners
- Insertion of tampon
- Tight clothing or blue jeans

[Full questionnaire](https://netforum.avectra.com/temp/ClientImages/ISSVD/3ef9c6ea-aac7-4d2b-a37f-058ef9f11a67.pdf)
Vulval Pain Functional Questionnaire

1. Because of my pelvic pain
   - [ ] 3 I can’t wear tight-fitting clothing like pantyhose that puts any pressure over my painful area.
   - [ ] 2 I can wear closer fitting clothing as long as it only puts a little bit of pressure over my painful area.
   - [ ] 1 I can wear whatever I like most of the time, but every now and then I feel pelvic pain caused by pressure from my clothing.
   - [ ] 0 I can wear whatever I like; I never have pelvic pain because of clothing.

2. My pelvic pain
   - [ ] 3 Gets worse when I sit, so it hurts too much to sit any longer than 30 minutes at a time.
   - [ ] 2 Gets worse when I sit. I can sit for longer than 30 minutes at a time, but it is so painful that it is difficult to do my job or sit long enough to watch a movie.
   - [ ] 1 Occasionally gets worse when I sit, but most of the time sitting is comfortable.
   - [ ] 0 My pain does not get worse with sitting, I can sit as long as I want to.
   - [ ] 0 I have trouble sitting for very long because of another medical problem, but pelvic pain doesn’t make it hard to sit.

3. Because of my pelvic pain
   - [ ] 3 I don’t get together with my friends or go out to parties or events.
   - [ ] 2 I only get together with my friends or go out to parties or events every now and then.
   - [ ] 1 I usually will go out with friends or to events if I want to, but every now and then I don’t because of the pain.
   - [ ] 0 I get together with friends or go to events whenever I want, pelvic pain doesn’t get in the way.

4. Because of my pelvic pain
   - [ ] 3 It hurts too much for my partner to touch me sexually even if the touching doesn’t go in my vagina.
   - [ ] 2 My partner can touch me sexually outside the vagina if we are very careful.
   - [ ] 1 It doesn’t usually hurt for my partner to touch me sexually outside the vagina, but every now and then it does hurt.
   - [ ] 0 It never hurts for my partner to touch me sexually outside the vagina.
   - [ ] 0 This question does not apply to me because I don’t have a sexual partner.
   - [ ] 0 Specifically, I won’t get involved with a partner because I worry about pelvic pain during sex.

Vulval Pain Questionnaire

Indicate the effect which the following have on your discomfort:

[On the list, circle the best treatments and underline the worst treatments]

<table>
<thead>
<tr>
<th>Effect</th>
<th>Heat (like a hot bath)</th>
<th>Cold (like a cool compress)</th>
<th>Sexual activity - (does not have to be intercourse)</th>
<th>Underwear</th>
<th>Friction (rubbing or scratching)</th>
<th>Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>Effect</td>
<td>Relief</td>
<td>Relief</td>
<td>Relief</td>
<td>Relief</td>
<td>Relief</td>
<td>Relief</td>
</tr>
<tr>
<td>No change</td>
<td>Worsens</td>
<td>No change</td>
<td>Worsens</td>
<td>No change</td>
<td>Worsens</td>
<td>No change</td>
</tr>
</tbody>
</table>

My discomfort usually causes

- NO interference with daily routine or planned activities
- SOME interference with daily routine or planned activities
- An interruption in daily routine or planned activities
- Confinement to bed
- The pursuit of immediate medical attention

Please mark the squares which best show the location of your symptoms

- Mons pubis area
- Clitoris
- Labia majora
- Labia minora
- Urethra (bladder opening)
- Vestibule (inside vulva)
- Vagina (within the vestibule)
- Perineum
- Anal area

Acute vs. Chronic Visceral Pain

**Acute**
- Rapid onset
- Severe/intense attacks
- Rapid progression
- Duration <3 months
- Commonly inflammation or infection

**Chronic**
- Duration ≥3 months
- Continuous non-cyclic condition

Clinical Features of Visceral Pain

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site</td>
<td>Thoracoabdominal, generally along the central axis and mainly in the low sternal and epigastric regions</td>
</tr>
<tr>
<td>Spatial discrimination</td>
<td>Poorly discriminated, diffused</td>
</tr>
<tr>
<td>Quality</td>
<td>Dull, heavy, oppressive, tense</td>
</tr>
<tr>
<td>Intensity</td>
<td>Slight to intolerable</td>
</tr>
<tr>
<td>Evolution in time</td>
<td>Continuous, subcontinuous, undulating, accessional (colics)</td>
</tr>
<tr>
<td>Duration</td>
<td>A few minutes to a few hours, after which pain stops or becomes &quot;referred&quot; (parietalized)</td>
</tr>
<tr>
<td>Emotional reaction</td>
<td>Severe anxiety, anguish, sense of impending death</td>
</tr>
<tr>
<td>Accompanying neurovegetative signs</td>
<td>Pallor, sweating, nausea, vomiting, brady- or tachycardia, pollakiuria, alvus disturbances</td>
</tr>
<tr>
<td>Additional stimuli</td>
<td>Do not increase pain</td>
</tr>
</tbody>
</table>
Clinical Features of Visceral Pain

• Temporal evolution
  • Features vary in different phases of pathology\(^1\)
• Diffuse and poorly defined sensation\(^1\)
• Regardless of organ of origin, pain is usually perceived in midline at level of lower sternum or upper abdomen
• Regardless of origin, in early stages pain is perceived in this same general area\(^2\)

Autonomic and Emotional Features of Visceral Pain

• **Autonomic symptoms**
  - Pallor
  - Profuse sweating
  - Nausea/vomiting
  - Changes in heart rate and blood pressure
  - Gastrointestinal disturbances (*e.g.*, diarrhea)
  - Changes in body temperature

• **Strong emotional reactions** commonly present
  - Anxiety
  - Anguish
  - Sometimes a sense of impending death
Clinical Features of “True Visceral Pain”

- Midline, poorly discriminated pain
- Marked neurovegetative and emotional features
- No hypersensitivity on palpation of painful area
- Intensity generally bears no relationship to extent of internal injury

Visceral pain should thus always be suspected when vague midline sensations of malaise are reported, especially in elderly patients.
Visceral Pain Descriptors

- Symptoms can be complex with considerable variability in frequency and intensity
- Descriptors vary with underlying organ involved and any pathology:
  - Sharp
  - Stabbing
  - Crampy
  - Squeezing sensation
  - Dull aching
  - Pressure or heaviness
- Severe, steady, or intermittent; may radiate
- Patients may experience pain only at certain times, such as pain during intercourse or pain during defecation or when standing

Some patients can become temporarily incapacitated by their pain

Associated Signs and Symptoms of Visceral Pain

- Associated signs and symptoms vary with the type of visceral pain
- Not all organs are sensitive to pain

<table>
<thead>
<tr>
<th>No pain when injured*</th>
<th>Excruciating pain when injured</th>
</tr>
</thead>
<tbody>
<tr>
<td>Liver</td>
<td>Stomach</td>
</tr>
<tr>
<td>Lung</td>
<td>Bladder</td>
</tr>
<tr>
<td>Kidney</td>
<td>Ureters</td>
</tr>
</tbody>
</table>

There is no close relationship between the degree of organ damage and the amount/type of pain as there is when a somatic organ is injured.

*The only symptoms felt are those due to abnormal functioning of these organs
Patterns of Referred Pain

- Liver and gallbladder
- Lung and diaphragm
- Heart
- Stomach
- Pancreas
- Small intestine
- Ovary (female)
- Colon
- Kidney
- Urinary bladder
- Appendix
- Ureter
Diagnosis of Visceral Pain
Visceral Pain Can Be Difficult to Diagnose

- Temporal evolution; insidious in early stages
- Diagnosis may be complicated by presence of concurrent painful conditions in >1 internal organ
- Pain intensity generally not related to extent of internal injury
- Further diagnostic issues arise as visceral pain progresses
  - Pain may be experienced at sites of body wall whose innervation enters spinal cord at same level as innervation from the involved organ
  - This is “referred pain”
Patients with visceral pain require careful assessment

- Patients should be referred to specialists for investigation and treatment in the first instance

- Patients become anxious and concerned that their persistent symptoms indicate investigations have not been thorough enough
  - They believe more tests are needed
  - They believe the pathology and reason for their pain has been missed

- However, visceral pain can be difficult to diagnose...
Patient Assessment

- Pain
  Intensity and duration

- Functioning/Productivity
  Does the pain interfere with activities?

- Social
  Sexual functioning; effect on relationships

- Psychological
  Depression, anxiety, sleep issues

Referred Pain

Pain perceived at a location other than the site of the painful stimulus

Poor localization of pain due to:

1. Projection to multiple segments
2. Low innervation density
3. Scattered spinal ramification
Characteristics of Referred Visceral Pain

- Relative to early, diffuse visceral pain, referred visceral pain is
  - Sharper
  - Better localized
  - Less likely to be accompanied by neurovegetative signs
  - Less likely to be accompanied by emotional signs
  - Similar in quality to pain of deep somatic origin
- May be associated with hyperalgesia of the tissues in the painful area

Referred visceral pain must be differentiated from pain of deep somatic origin
Primary Somatic Pain vs. Referred Visceral Pain
Diagnosing Referred Visceral Pain

- May be associated with hyperalgesia of tissues in the painful area = referred visceral pain with hyperalgesia
- Hyperalgesia of referred pain is usually confined to the muscle, often accompanied by sustained contraction
- May also extend superficially to cutaneous tissue and skin when underlying painful processes are repeated or long lasting

A search for hyperalgesia in the somatic region to which pain is referred must be an integral part of the initial physical diagnostic exam of a patient with suspected visceral pathology

- Absence of hypersensitivity allows symptom to be categorized as referred visceral pain without hyperalgesia
Differentiating Referred Pain without Hyperalgesia from True Parietal Pain*

*Primary somatic pain or referred pain with hyperalgesia
Referred Visceral Pain with Hyperalgesia

- Likely due to central sensitization involving viscerosomatic convergent neurons
- Prominent because it is accentuated by repetition of visceral episodes and persists long after initiating pain has ended
- Trophic changes common
- Thickening of subcutaneous tissue
- Some degree of local muscle atrophy
- Both changes may persist long after primary visceral problem is in remission

Visceral pain can affect the somatic tissues in the referred area for months or even years
Visceral Hyperalgesia

• Very frequent in the clinical setting
• Increased sensitivity of an internal organ such that even non-pathological, normal stimuli may produce pain from that organ
• Usual due to visceral inflammation → peripheral and central sensitization
• Examples
  • Ingestion of foods/liquids when esophagus/stomach mucosa inflamed
  • Pain from normal bladder distension with inflamed lower urinary tract
Viscerovisceral Hyperalgesia

- Augmentation of pain due to sensory interaction between two different internal organs that share at least part of their afferent circuitry
- Most likely produced by sensitization processes involving viscerovisceral convergent neurons in the CNS
- Example:
  - Patients with CHD + gallbladder calculosis may experience more frequent attacks of angina and billiary colic than patients with a single condition
    - Due to partially overlapping T5 afferent pathways of heart and gallbladder

CHD = coronary heart disease; CNS = central nervous system
Clinical Assessment of Pain

- **Functional Assessment**
  - Does the pain interfere with activities?

- **Psychological Assessment**
  - Does the patient have concomitant depression, anxiety, or mental status changes?
  - Does the patient have sleep disorders or a history of substance abuse/dependence?

- **Medication History**
  - What medications have been tried in the past?
  - Which medications have helped?
  - Which medications have not helped?

Testing for Visceral Pain

• Patient history
• Physical exam

Usually sufficient to determine a functional diagnosis

• Appropriate work-up may include
  • Lab tests for infectious and inflammatory processes
  • Imaging of sites not readily assessed by physical exam

Pain History Worksheet

• Site of pain
• What causes or worsens the pain?
• Intensity and character of pain
• Associated symptoms?
• Pain-related impairment in functioning?
• Relevant medical history

Patient history and physical exam are usually sufficient to determine a functional diagnosis

Determine Pain Intensity

**Simple Descriptive Pain Intensity Scale**

- No pain
- Mild pain
- Moderate pain
- Severe pain
- Very severe pain
- Worst pain

**0–10 Numeric Pain Intensity Scale**

- 0: No pain
- 1: 1
- 2: 2
- 3: 3
- 4: 4
- 5: Moderate pain
- 6: 6
- 7: 7
- 8: 8
- 9: 9
- 10: Worst possible pain

**Faces Pain Scale – Revised**

APS Questionnaire

- Measures 6 aspects of quality:
  - Pain severity and relief
  - Impact of pain on activity, sleep and negative emotions
  - Side effects of treatment
  - Helpfulness of information about pain treatment
  - Ability to participate in pain treatment decisions
  - Use of non-pharmacological strategies
Brief Pain Inventory

Pain Assessment: PQRST Mnemonic

- **P**rovocative and **P**alliative factors
- **Q**uality
- **R**egion and **R**adiation
- **S**everity
- **T**iming, **T**reatment
Importance of Diagnosing and Treating Underlying Condition

- Visceral pain symptoms may herald a life-threatening underlying cause
- Examples:
  - Myocardial infarction
  - Intestinal obstruction
  - Acute pancreatitis
  - Peritonitis

Prompt evaluation and specific diagnosis of visceral pain is mandatory
Importance of Pain Assessment

• Screen for red flags requiring immediate investigation and/or referral
• Identify underlying cause
  – Pain is better managed if the underlying causes are determined and addressed
• Recognize type of pain to help guide selection of appropriate therapies for treatment of pain
• Determine baseline pain intensity to enable future assessment of efficacy of treatment

Pain is a significant predictor of morbidity and mortality

Causes of Visceral Pain by Location
Visceral Pain

- Gastric ulcer
- Biliary pain
- Pancreatic pain
- Ureter stone
- Appendicitis
- Angina pain
Psychogenic Pain and Visceral Pain

- Psychological morbidity is common in patients with organic or functional visceral pain
  - Unclear how much of the comorbidity is cause and how much is effect
Depression Scales

<tr>
<td>7. Trouble concentrating on things, such as reading the newspaper or watching television</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>8. Moving or speaking so slowly that other people could have noticed? Or the opposite — being so fidgety or restless that you have been moving around a lot more than usual</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>9. Thoughts that you would be better off dead or of hurting yourself in some way</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
</tbody>
</table>

(For office coding: Total Score = _______ + _______ + _______)

If you checked off any problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people?

- Not difficult at all
- Somewhat difficult
- Very difficult
- Extremely difficult

Hamilton Depression Rating Scale (HAM-D)

1. Depressed Mood
   (sadness, hopelessness, helplessness, worthlessness)
   0  Absent
   1  These feeling states indicated only on questioning
   2  These feeling states spontaneously reported
   3  Communicates feeling states nonverbally, in manner of expression, posture, voice and tendency to talk.
   4  Patient reports VIRTUALLY ONLY these feelings spontaneously verbal and nonverbal communication

2. Feelings of Guilt
   0  Absent
   1  Self-reproach, feels he has let people down
   2  Ideas of guilt or rumination over past errors
   3  Present illness is a punishment. Delusional beliefs
   4  Hears accusatory or denunciatory voices and threatening visual hallucinations

3. Suicide
   0  Absent
   1  Feels life is not worth living
   2  Wishes he were dead or anything of this world
   3  Suicide ideas or gesture
   4  Attempts at suicide (any serious attempt rating)

4. Insomnia - Early
   0  No difficulty falling asleep
   1  Complains of occasional difficulty falling asleep
   2  Complains of nightly difficulty falling asleep

5. Insomnia - Middle
   0  No difficulty
   1  Patient complains of being restless and disturbed from side to side
   2  Waking during the night - anything out of bed (except for purposes of voiding)

6. Insomnia - Late
   0  No difficulty
   1  Waking in early hours of the morning but gets up and goes to work
   2  Unable to fall asleep again if gets out of bed

9. Agitation
   0  None
   1  “Playing with” hand, hair, etc.
   2  Hand-wringing, nail-biting, biling of lips

10. Anxiety - Psychic
    0  No difficulty
    1  Subjective tension and irritability
    2  Worrying about minor matters
    3  Apprehensive attitude apparent in face or speech
    4  Fears expressed without questioning

11. Anxiety - Somatic
    0  Absent
    1  Physiological concomitants of anxiety such as:
       1  Mild  Gastrointestinal - dry mouth, wind, indigestion,
       2  Moderate  diarrhea, cramps, beching
       3  Severe  Cardiovascular - palpitations, headaches
       4  Incapacitating  Respiratory - hyperventilation, sighing
                      Urinary frequency
                      Sweating

12. Somatic Symptoms - Gastrointestinal
    0  None
    1  Loss of appetite but eating without staff encouragement. Heavy feelings in abdomen.
    2  Difficulty eating without staff urging. Requests or requires laxatives or medications for bowels or medication for G.I. symptoms.

13. Somatic Symptoms - General
    0  None
    1  Heaviness in limbs, back or head, backaches, headache, muscle aches, loss of energy and fatigability
    2  Any clear-cut symptom rates 2

14. Genital Symptoms
    0  Absent 0  Not ascertained
    1  Mild  Symptoms such as: loss of libido,
    2  Severe  menstrual disturbances
Montgomery-Åsberg Depression Rating Scale

1. Apparent Sadness
   Representing despondency, gloom and despair (more than just ordinary transient low spirits) reflected in speech, facial expression, and posture. Rate by depth and inability to brighten up.
   0 - No sadness.
   2 - Looks dispirited but does brighten up without difficulty.
   4 - Appears sad and unhappy most of the time.
   6 - Looks miserable all the time. Extremely despondent.

2. Reported Sadness
   Representing reports of depressed mood, regardless of whether it is reflected in appearance or not. Includes low spirits, despondency or the feeling of being beyond help and without hope.
   0 - Occasional sadness in keeping with the circumstances.
   2 - Sad or low but brightens up without difficulty.
   4 - Pervasive feelings of sadness or gloominess. The mood is still in circumstances.
   6 - Continuous or unvarying sadness, misery or despondency.

3. Inner Tension
   Representing feelings of ill-defined discomfort, edginess, inner turmoil, mounting to either panic, dread or anguish. Rate according to intensity and the extent of reassurance called for.
   0 - Placid. Only fleeting inner tension.
   2 - Occasional feelings of edginess and ill-defined discomfort.
   4 - Continuous feelings of inner tension or intermittent panic which the master with some difficulty.
   6 - Unrelenting dread or anguish. Overwhelming panic.

8. Inability to Feel
   Representing the subjective experience of reduced interest in the surroundings or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.
   0 - Normal interest in the surroundings and in other people.
   2 - Reduced ability to enjoy usual interests.
   4 - Loss of interest in the surroundings. Loss of feelings for friends and acquaintances.
   6 - The experience of being emotionally paralyzed, inability to feel anger, grief or pleasure and a complete or even painful failure to feel for close relatives and friends.

9. Pessimistic Thoughts
   Representing thoughts of guilt, inferiority, self-reproach, sinfulness, remorse, and ruin.
   0 - No pessimistic thoughts.
   2 - Fluctuating ideas of failure, self-reproach or self-depreciation.
   4 - Persistent self-accusations or definite but still rational ideas of guilt or sin. Increasingly pessimistic about the future.
   6 - Delusions of ruin, remorse or irredeemable sin. Self-accusations which are absurd and unshakable.

10. Suicidal Thoughts
    Representing the feeling that life is not worth living, that a natural death would be welcome, suicidal thoughts, and preparations for suicide. Suicide attempts should not in themselves influence the rating.
    0 - Enjoys life or takes it as it comes.
    2 - Weary of life. Only fleeting suicidal thoughts.
    4 - Probably better off dead. Suicidal thoughts are common, and suicide is considered as a possible solution, but without specific plans or intentions.
    6 - Explicit plans for suicide when there is an opportunity. Active preparations for suicide.

Beck Depression Inventory

Beck's Depression Inventory

This depression inventory can be self-scored. The scoring scale is at the end of the questionnaire.

1. I do not feel sad.
   - 0 I do not feel sad.
   - 1 I feel sad.
   - 2 I am sad all the time and I can't snap out of it.
   - 3 I am so sad and unhappy that I can't stand it.

2. I am not particularly discouraged about the future.
   - 0 I am not particularly discouraged about the future.
   - 1 I feel discouraged about the future.
   - 2 I feel I have nothing to look forward to.
   - 3 I feel the future is hopeless and that things cannot improve.

3. I do not feel like a failure.
   - 0 I do not feel like a failure.
   - 1 I feel I have failed more than the average person.
   - 2 As I look back on my life, all I can see is a lot of failures.
   - 3 I feel I am a complete failure as a person.

4. I get as much satisfaction out of things as I used to.
   - 0 I get as much satisfaction out of things as I used to.
   - 1 I don't enjoy things the way I used to.
   - 2 I don't get real satisfaction out of anything anymore.
   - 3 I am dissatisfied or bored with everything.

5. I don't feel particularly guilty.
   - 0 I don't feel particularly guilty.
   - 1 I feel guilty a good part of the time.
   - 2 I feel quite guilty most of the time.
   - 3 I feel guilty all of the time.

6. I don't feel I am being punished.
   - 0 I don't feel I am being punished.
   - 1 I feel I may be punished.
   - 2 I expect to be punished.
   - 3 I feel I am being punished.

7. I don't feel disappointed in myself.
   - 0 I don't feel disappointed in myself.
   - 1 I am disappointed in myself.
   - 2 I am disgusted with myself.
   - 3 I hate myself.

8. I don't feel I am any worse than anybody else.
   - 0 I don't feel I am any worse than anybody else.
   - 1 I am critical of myself for my weaknesses or mistakes.
   - 2 I blame myself all the time for my faults.
   - 3 I blame myself for everything bad that happens.

9. I don't have any thoughts of killing myself.
   - 0 I don't have any thoughts of killing myself.
   - 1 I have thoughts of killing myself, but I would not carry them out.
   - 2 I would like to kill myself.
   - 3 I would kill myself if I had the chance.

10. I don't cry any more than usual.
    - 0 I don't cry any more than usual.
    - 1 I cry more now than I used to.
    - 2 I cry all the time now.
    - 3 I used to be able to cry, but now I can't cry even though I want to.

11. I am no more irritated by things than I ever was.
    - 0 I am no more irritated by things than I ever was.
    - 1 I am slightly more irritated now than usual.
    - 2 I am very irritated at times.
    - 3 I feel irritated all the time.

12. I have not lost interest in other people.
    - 0 I have not lost interest in other people.
    - 1 I am less interested in other people than I used to be.
    - 2 I have lost most of my interest in other people.
    - 3 I have lost all of my interest in other people.

13. I make decisions as well as I ever could.
    - 0 I make decisions as well as I ever could.
    - 1 I put off making decisions more than I used to.
    - 2 I have greater difficulty in making decisions more than I used to.
    - 3 I can't make decisions at all anymore.

14. I don't feel that I look any worse than I used to.
    - 0 I don't feel that I look any worse than I used to.
    - 1 I am worried that I am looking old or unattractive.
    - 2 I feel I am permanent changes in my appearance that make me look unattractive.
    - 3 I believe that I look ugly.

15. I can work about as well as before.
    - 0 I can work about as well as before.
    - 1 It takes an extra effort to get started at doing something.
    - 2 I have to push myself very hard to do anything.
    - 3 I can't do any work at all.

16. I can sleep as well as usual.
    - 0 I can sleep as well as usual.
    - 1 I don't sleep as well as I used to.
    - 2 I wake up 1-2 hours earlier than usual and find it hard to get back to sleep.
    - 3 I wake up several hours earlier than I used to and cannot get back to sleep.

17. I don't get more tired than usual.
    - 0 I don't get more tired than usual.
    - 1 I get tired more easily than I used to.
    - 2 I get tired from doing almost anything.
    - 3 I am too tired to do anything.

18. My appetite is no worse than usual.
    - 0 My appetite is no worse than usual.
    - 1 My appetite is not as good as it used to be.
    - 2 My appetite is much worse now.
    - 3 I have no appetite at all.

19. I haven't lost much weight, if any, lately.
    - 0 I haven't lost much weight, if any, lately.
    - 1 I have lost more than 5 pounds.
    - 2 I have lost more than ten pounds.

20. I am no more worried about my health than usual.
    - 0 I am no more worried about my health than usual.
    - 1 I am worried about physical problems like aches, pains, upset stomach, or constipation.
    - 2 I am very worried about physical problems and it's hard to think of much else.
    - 3 I am so worried about my physical problems that I can't think of anything else.

21. I have not noticed any recent change in my interest in sex.
    - 0 I have not noticed any recent change in my interest in sex.
    - 1 I am less interested in sex than I used to be.
    - 2 I have almost no interest in sex.
    - 3 I have lost interest in sex completely.
